

Shapes App

Introduction.

The Shape app allows you to drop shapes onto your pages.

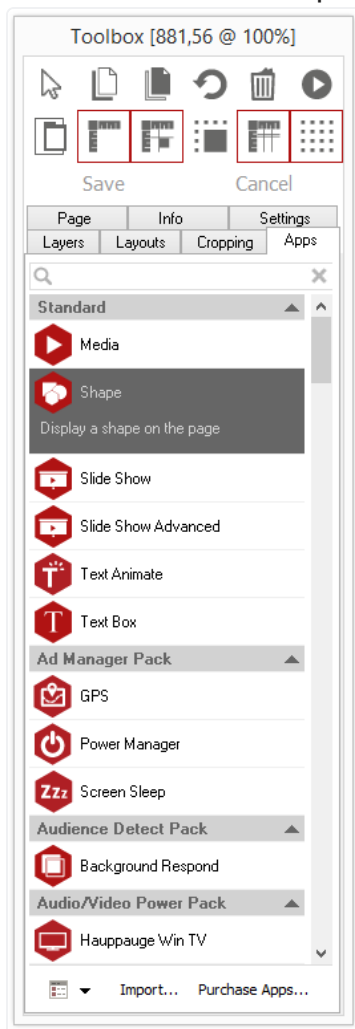

Uses.

Shapes can be used to zone content easily to make a more engaging digital signage project.

Using Shape app.

To access the app open an existing or new page and select the **'App'** tab of the page editor **'Toolbox'** (shown below). This App comes as standard with Acquire V4 and is therefore not sold or licensed separately

Select the app from the list or search for it using the search bar. When an app is selected it will be highlighted as shown. Here the Shape app has been selected.

Once you have selected your app draw an area on your page where you would like to use the app. In this case you will be drawing a space where you want to include a shape on the page. This can be re-positioned and re-sized at any point.

The **'Settings'** tab within the Toolbox will automatically open when the app is added to the page.

From here you can format your Shape using the following settings.

You can change the shape by selecting the shape from the drop down menu.

Rotate the image by moving the lever round or by inputting the number in the box.

If you would like to include a background colour tick the **'Background'** check box.

You can have a single colour or gradient colour, as well as change the direction of the gradient.

The shape fill colour, outline and shadow can also be changed in the same way.

When editing your shape the changes are viewable in real-time so you don't have to refresh your page.
