

Pop-Up App

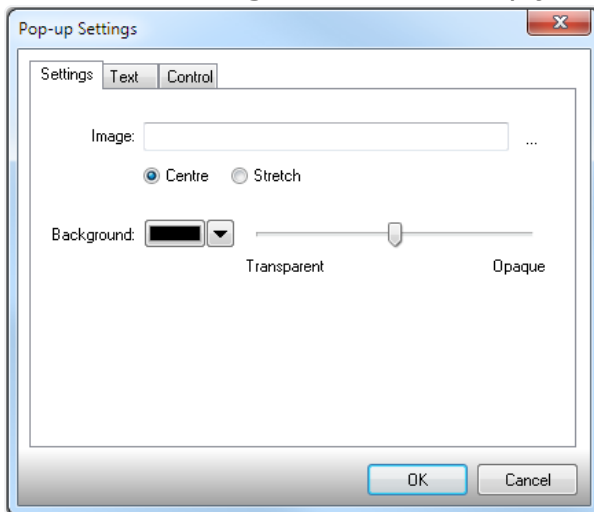

Purpose

This Page App displays an image and/or text in a popup screen that sits on top the current project window. You can use it to display alerts etc.

It is opened and closed when an Acquire Variable is set to a specified value. It can also be closed on a user click or after a number of seconds.

Configuration window

Use the following screens to set up your popup screen.

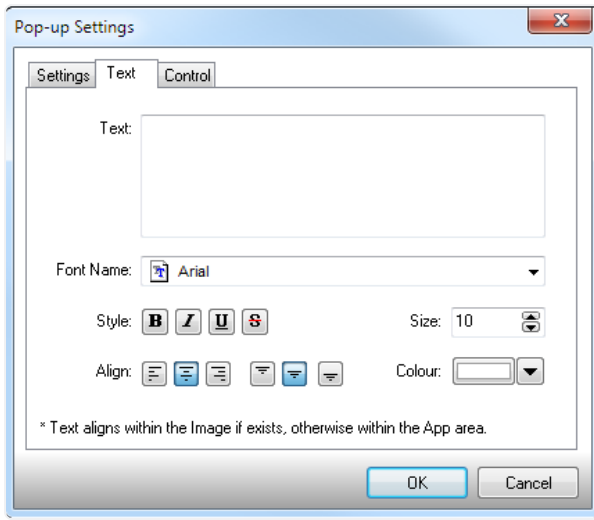

Settings Tab

Image: Type in or use the "... " button to select an image from the project's Media Folder. This image will be shown in the popup. Select to centre it in the popup or stretch to fill it. You can use an Acquire Variable here.

Background: When shown, the Popup App fills with the colour selected here. The Image and any text is shown over that. You can also select the Popup's transparency here.

as:light tip: A light automatic snapshot of current page is shown when not fully opaque. Therefore animations will appear to pause.

Text Tab

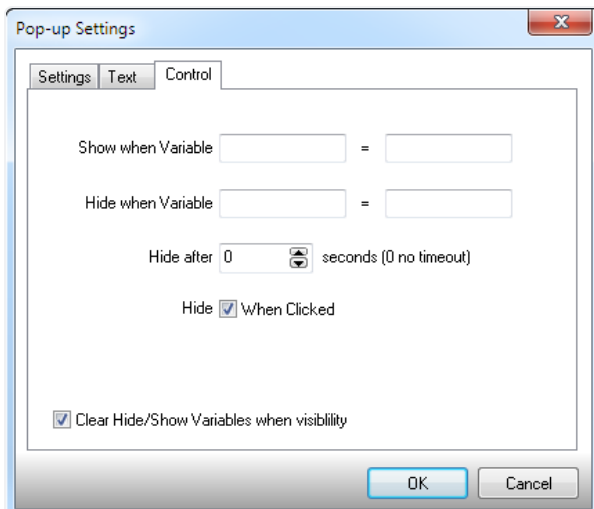

Text: Enter any text that you want to appear in the popup. You can use an Acquire Variable here.

Font Settings: Configure how and where the text should look.

Tip: If an Image is used the text will be aligned to that Image. Otherwise text will be aligned to the actual Popup App.

Control Tab

Show: Enter an Acquire Variable. The popup will open when that variable equals the entered value. The value may also be an Acquire Variable

Hide: Use a variable to close the popup in the same way as showing it. You can also close after a number of seconds or when the user clicks the popup.

Clear: Check this to clear the above control variables when the popup opens/closes. This will prevent the popup immediately opening again if the variable isn't cleared elsewhere.
