

Web Address App

Introduction.

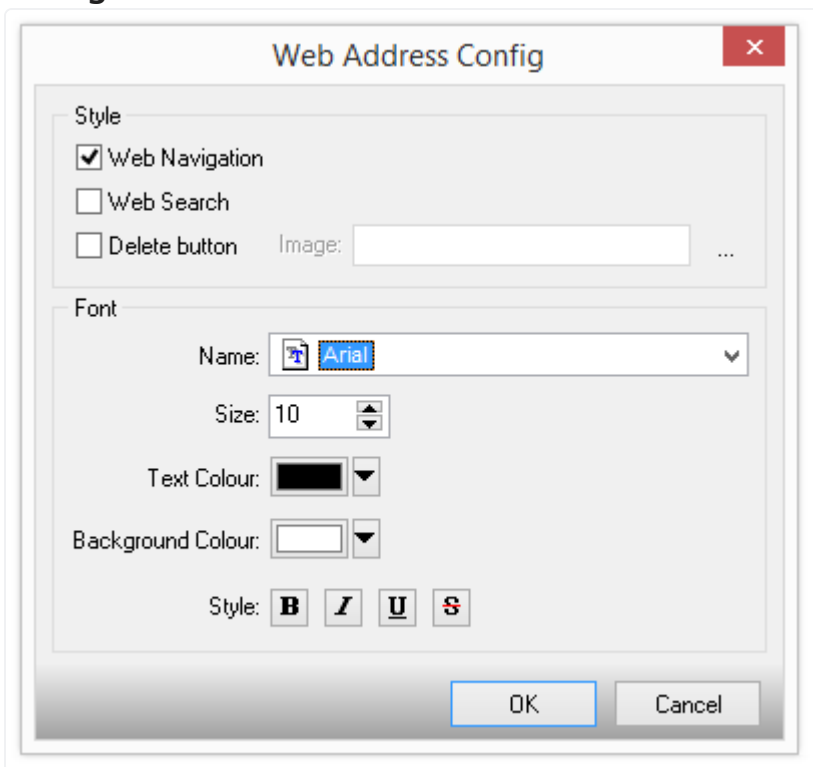

This app is an integrated URL Input Box (address bar) and Web Search Box.

When placed on the same page as a ~~Cyber Browser page app~~ it will communicate with it. You can then:

- Enter URLs to navigate around the internet.
- Enter a search term. This uses Google Search.

~~as:lightbulb~~ **Tip!** ~~if there are multiple Cyber Browser apps on the page the Web Address app will communicate with the first one it finds only.~~

Configuration.

Set the style of the address bar:

“Web Navigation”

“Web Search” to allow entered terms to be searched with Google Search.

“Delete button” for a button to appear when there is text in the box. Clicking the button will clear the text.

Font: select the address bar’s font attributes and the bars background colour.
